

What We Do: Simplify Enterprise Mobility

AirWatch[®] by VMware[®] is the global leader in enterprise-grade mobility solutions across every device, every operating system and every mobile deployment. Our scalable enterprise mobility management platform integrates with existing enterprise systems and allows you to manage all devices, regardless of type, platform or ownership, from one central console.

Built from the Ground Up on a True Platform

One Platform

```

```

One Code Base

One Console

Every Mobile Device

Manage any mobile device type, including smartphones, tablets, laptops, desktops, rugged devices, printers and peripherals.

Every Mobile Operating System

Support multiple operating systems including Android[™], Apple[®] iOS, BlackBerry[®], Chrome OS, Mac[®] OS and Windows[®] across your organization.

Every Mobile Deployment

Enable deployments with multiple device ownership models, including corporate, employee-owned, line of business, kiosk and shared.

Company Differentiators

- Single platform for enterprise mobility management
- Central console to manage devices, apps, and content
- Same-day support for all major OS and OEM releases
- Seamless integration and unified user experience
- Best-in-class architecture that is scalable and secure
- Unparalleled multitenancy and role-based access control
- Tight integration to existing enterprise systems
- Automated compliance engine with pre-defined rules
- Strong global presence and localized sales, services and support
- Financial strength of VMware enables continued innovation

How We Do It: Enterprise Mobility Management Platform

Container

AirWatch[®] Container provides complete separation of corporate and personal data on devices, securing corporate resources and maintaining employee privacy. AirWatch enables organizations to standardize enterprise security and data loss prevention strategies across mobile devices through our flexible approach to containerization.

Devices

AirWatch[®] Mobile Device Management allows you to gain visibility into the devices – including smartphones, tablets and laptops – connecting to your enterprise network, content and resources. Quickly enroll devices in your enterprise environment, update device settings over-the-air, and enforce security policies and compliance across your entire device fleet.

Apps

AirWatch[®] Mobile Application Management enables you to manage internal, public and purchased apps across devices enrolled in your organization. Distribute, update, track and recommend apps with AirWatch[®] Catalog. Build custom business apps with the AirWatch[®] Software Development Kit or by following AirWatch-sponsored ACE documentation, or wrap existing internal applications for advanced security with AirWatch[®] App Wrapping.

Content

AirWatch[®] Mobile Content Management secures document distribution and promotes content collaboration anytime, anywhere with AirWatch[®] Content Locker. Access your corporate content in a secure container with advanced data loss prevention policies. Promote collaboration with editing, annotation and commenting capabilities for shared files.

Email

AirWatch[®] Mobile Email Management delivers comprehensive security for your corporate email infrastructure. With AirWatch, you can control which mobile devices access email, prevent data loss, encrypt sensitive data and enforce advanced compliance policies. Containerize email and provide a consistent user experience with AirWatch[®] Inbox, a secure email client.

Browsing

AirWatch[®] Browser is a secure browsing alternative to native browsers and provides organizations with the ability to configure customized settings to meet unique business and end-user needs. Define and enforce secure browsing policies for intranet sites without a device-level VPN. Enable secure browsing with whitelists and blacklists or kiosk mode.

Telecom

AirWatch[®] Telecom Management enables IT to easily monitor data, voice and roaming usage alongside devices from the admin console. With AirWatch, IT has insight into telecom usage to help save time, money and resources. Roaming restrictions, automated compliance enforcement and self-service options for end users simplify telecom management for IT.

Secure Messaging

AirWatch[®] Chat is an enterprise-grade messaging solution enabling users to send instant messages and images securely within your enterprise. Messages are encrypted in-transit between user devices and data loss prevention policies can be configured, ensuring complete security.
